铸件工人心电图检查应注意清洗皮肤

顾祖球

(太仓市卫生防疫站, 江苏 太仓 215400)

2001 年 5 月, 我站对本市仓庆金属制品有限公司接害职工进行了健康监护。在对接尘工人心电图检查时, 发现有严重的基线漂移干扰问题, 现分析报道如下。

21 名铸件工人在 FCP-2155 自动分析心电图机上都表现为严重的基线漂移干扰, 开启抗交流干扰、抗肌电干扰及抗漂移干扰滤波均无效。换成 XDH-3B 心电图机检查亦如此。当时

考虑可能是一墙之隔的一台交流电调压器磁场的影响(该调压器为当日临时放置)。次日移去调压器后为其他人群行心电图检查如常。一周后再次为这 21 名铸件工人做心电图检查, 结果仍如前次。分析可能是铸件工人体表密布金属粉尘导致体表心电图短路紊乱所致。后嘱铸件工人先清洗皮肤, 在上班前进行检查。结果, 清洗彻底的工人心电图检查如常; 清洗不彻底的工人心电图上仍有一定的基线漂移, 但尚可识别; 2 名工人因未认真清洗皮肤仍无法进行心电图检查。上述推测得到证实。

因此在为接触金属粉尘的工人进行心电图检查前, 将彻底清洗皮肤列为常规十分必要。
